

EXAMPLE What is $11 \times 11$ ?
We already know
$10 \times 10=100$.

To get from a $10 \times 10$ square to an $11 \times 11$ square, we just add 10 squares on the side and 11 squares on the top:

$$
11 \times 11=(10 \times 10)+(10+11)=100+21=121 .
$$

## PRACTICE

34. Now that we know $11 \times 11=121$, what is $12 \times 12$ ?

Use your answer above to find the squares below:
35. $13 \times 13$
36. $14 \times 14$
37. How much larger is 15 squared than 14 squared?
34. $\qquad$
35. $\qquad$
36. $\qquad$
37. $\qquad$

If we know a perfect square, it is also easy to find the next-smallest perfect square by

We know that $20 \times 20=400$. subtracting!

EXAMPLE What is $19 \times 19$ ?

To get from a $20 \times 20$ square to a $19 \times 19$ square, we remove a row on top and a column on the side. To find $19 \times 19$, we subtract 20 and 19 from 400.

Subtracting 20 and 19 is the same as subtracting 39: $19 \times 19=(20 \times 20)-20-19=400-39=361$.
38. Now that we know $19 \times 19=361$, what is $18 \times 18$ ?

39. What is $(18 \times 18)-(17 \times 17)$ ?
40. What is $(93 \times 93)-(92 \times 92)$ ?
38. $\qquad$
39. $\qquad$
40. $\qquad$

41. $200 \times 200=$ $\qquad$
$201 \times 201=$ $\qquad$
$202 \times 202=$ $\qquad$
43. $50 \times 50=$ $\qquad$
$49 \times 49=$ $\qquad$
$48 \times 48=$ $\qquad$
45. $29 \times 29=$ $\qquad$
$30 \times 30=$ $\qquad$
$31 \times 31=$ $\qquad$
42. $35 \times 35=$ $\qquad$
$36 \times 36=$ $\qquad$
$37 \times 37=$ $\qquad$
44. $25 \times 25=$ $\qquad$
$24 \times 24=$ $\qquad$
$23 \times 23=$ $\qquad$
46. $39 \times 39=$ $\qquad$
$40 \times 40=$ $\qquad$
$41 \times 41=$ $\qquad$
